

FCC,

Please DO NOT approve LightSquared's request for use of spectrum that has shown to interfere with the current GPS system.

I am a member of a volunteer wilderness search and rescue team. Our lives and the lives of those in need depend on our equipment. The GPS system is an integral part of our search and rescue equipment. Without it, we are not able to report the position or important clues and hopefully the person lost.

LightSquare's argument that they have no obligation to fix the GPS interference is a last ditch effort since they are running out of money: See Reuters' article:

<<http://www.reuters.com/article/2011/12/19/us-falcone-wireless-idUSTRE7BI1U320111219>>

Please, if not for my safety, for the safety of those lost, DO NOT APPROVE LightSquared use of spectrum until they can come up with fix for the interference with the current GPS system.

Thank you for your consideration,

William H. Smith
